

# Automation of Vascular Interventional Surgery

2018 Jan 3 Michael Lee & Emily Hsu & WJ SUN

# OVERVIEW

- Motivation
- System Architecture
- Surgeon side
- Patient side
- Future Works

# VASCULAR INTERVENTIONAL SURGERY

# KEY *ISSUE* in SURGICAL PROCESS

*Radiation  
lead clothing up to 5 kilograms*

*Automation* can reduce the  
radiation dose of the surgeon

# Current Status: Inspection Catheter

Guide Wire

Catheter

Rapid Exchange (RX)

Balloon

Sterling Monorail® Balloon Catheter

# SYSTEM ARCHITECTURE

controller

server

user interface

Patient (Slave) Side

Surgeon (Master) Side

# MASTER – SLAVE INTERACTION

Patient (Slave) Side

Surgeon (Master) Side

*Translational,  
Rotational Motion*

*Motion Command  
by Manipulating catheter*

*Force Measured  
shear stress on blood vessel*

*Simulate Force  
Feedback*

# SURGEON SIDE BRAKE

## Design Target

get force feedback from patient side, and realize the force environment on the surgeon side.

## Experiment Target:

plot the friction curve of different brake materials, and find the suitable operation region of realizing force feedback.

# SURGEON SIDE BRAKER MECHANISM

Technology sponge

Low density sponge

# POSITION CONTORL OF SERVO MOTOR

# Friction Force Measurement

# TECHNOLOGY SPONGE

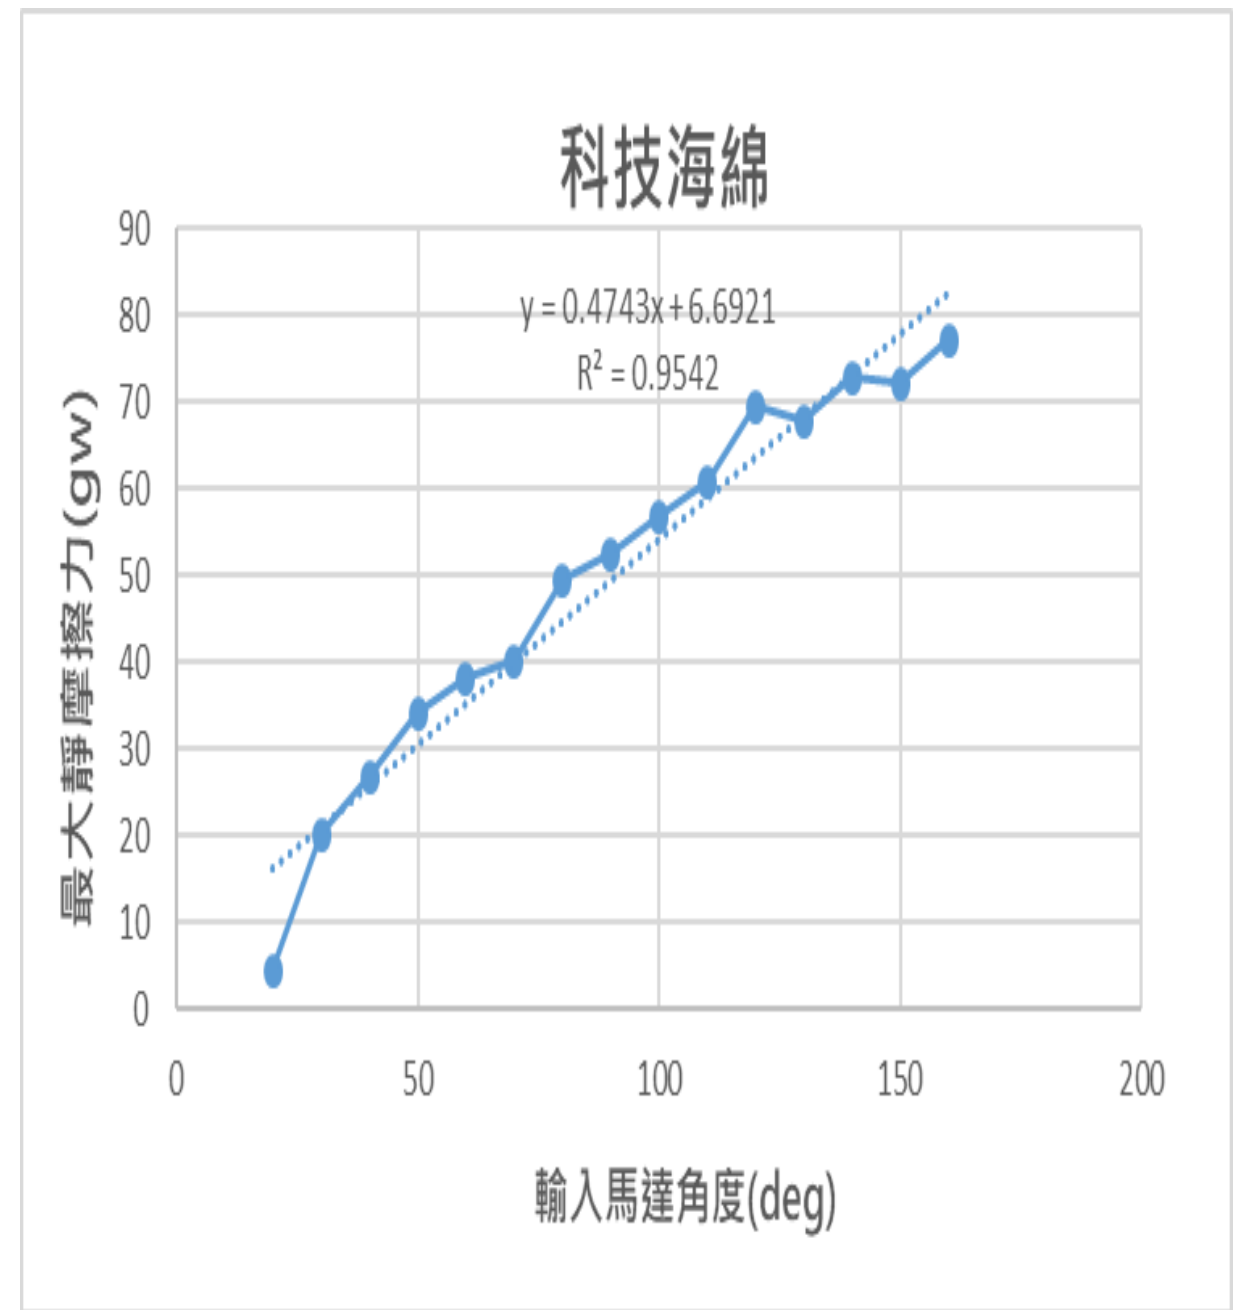

# LOW DENSEITY SPONGE

# COMPARE SPONGE

# Vessel Segmentation

## Identify blockage in blood vessels

# Patient Side Functions

1. Design of mechanism
2. Implementation of mechanism
3. Issues

# System Overview Patient Side

# DESIGN DEMO

# IMPLEMENTATION OF GRIPPER

# DESIGN OF ROTOR

# DESIGN OF ROTOR

Holder

Load Cell

Driven Plate

Driving Motor

# DESIGN OF ROTOR

Bearing is needed to overcome friction

# PREVIOUS MANIPULATOR DESIGN

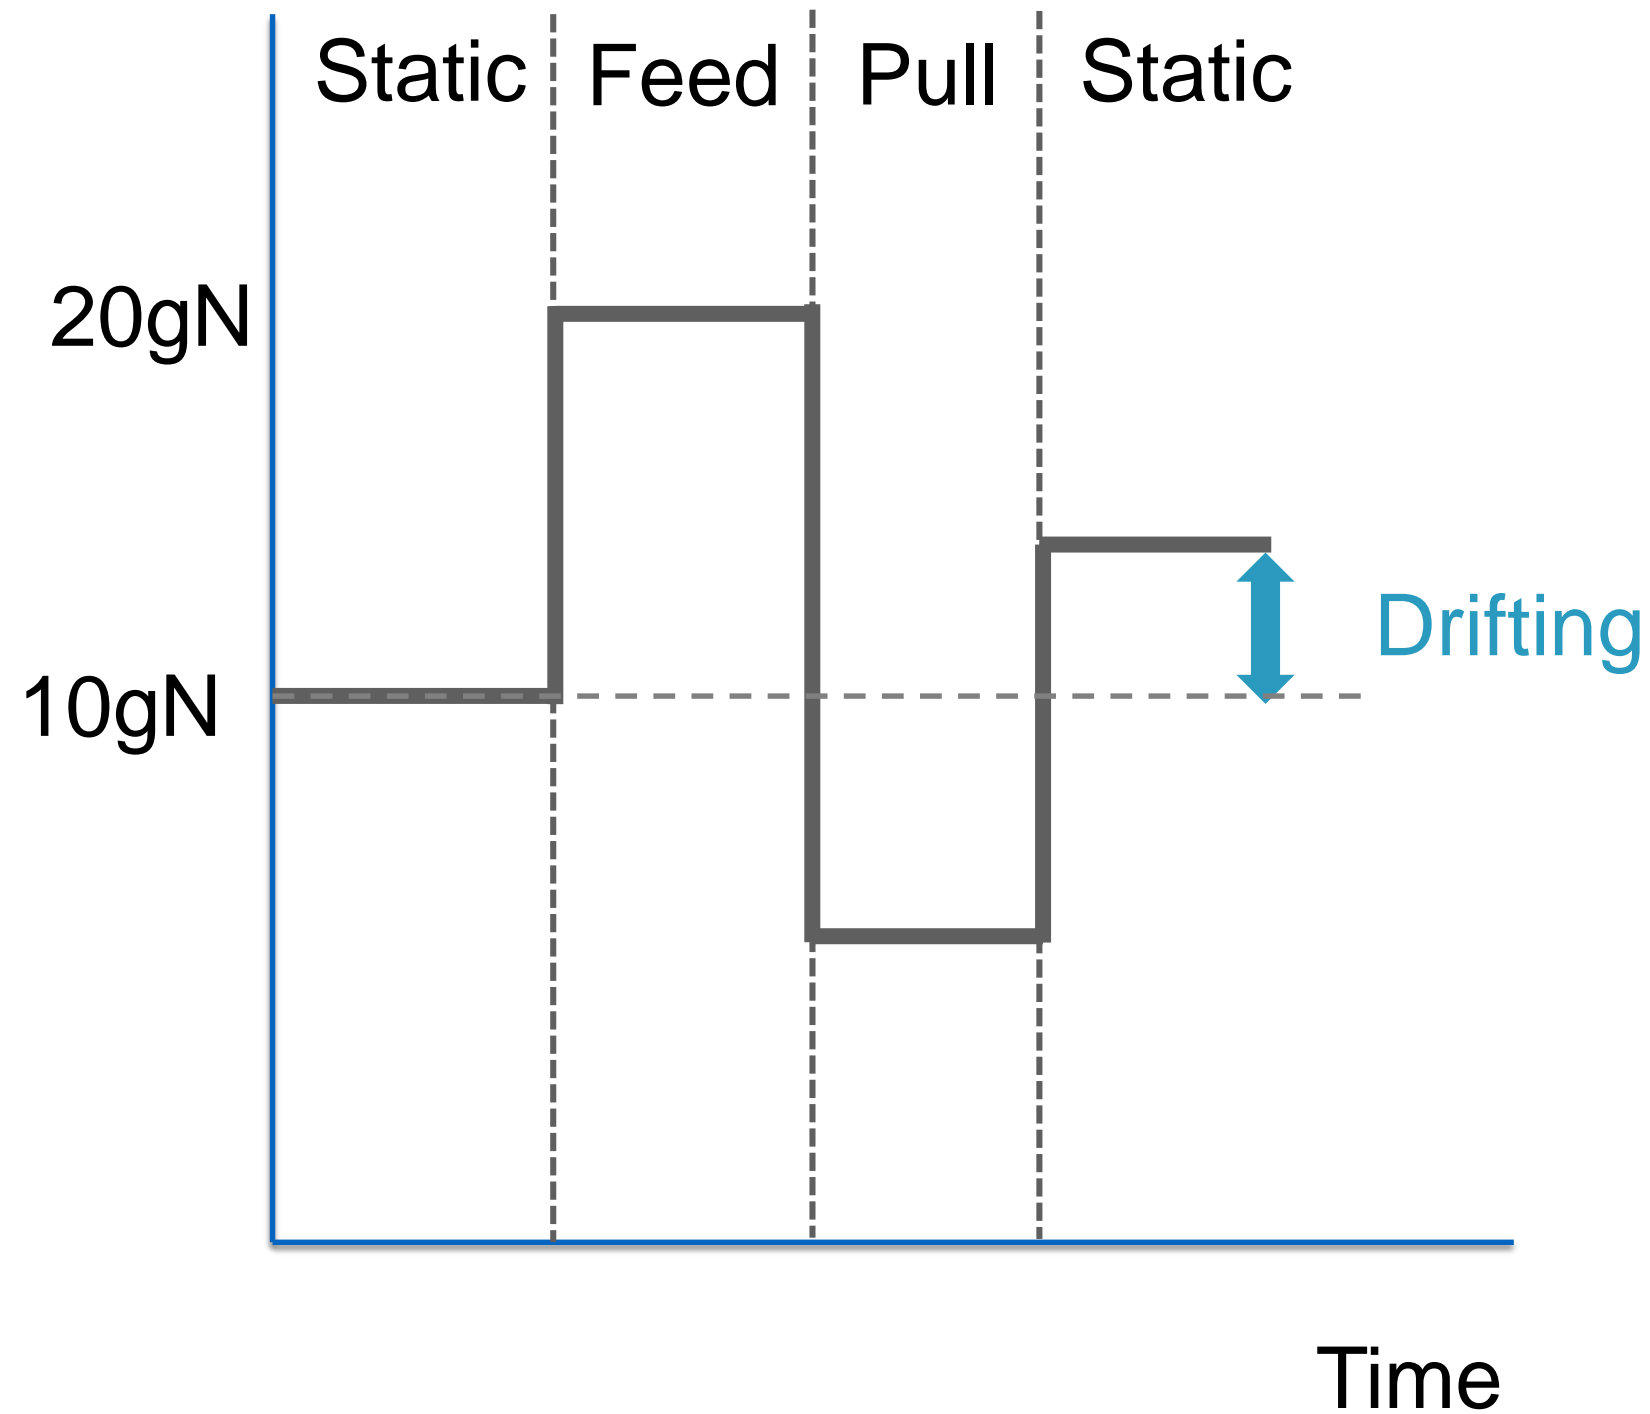

Getting Axial Force Feedback is Hard

# EXPERIMENT OF LOAD CELL

# EXPERIMENT OF LOAD CELL

# CONECPT DESIGN OF ALINGER

# CONECPT DESIGN OF ALINGER

# FUTURE WORKS

Testing more kinds of brake materials  
Improve position control of the brake

Select suitable bearing and load cell for  
the design

The idea of aligner need to be verified
